Module code		SC-4319					
Module Title		Inorganic Materials Chemistry					
Degree/Diploma		Bachelor of Science (Chemistry)					
Type of Module		Major Option					
Modular Credits		2		Total student Workload	5	hours/week	
				Contact hours	2	hours/week	
Prerequisite		SC-1211 Fundamentals of Inorganic Chemistry					
Anti-requisite		None					
Aims							
The module is designed for students to understand the structure and properties of inorganic							
materials and the various techniques needed for their characterisation							
Learning Outcomes							
On successful completion of this module, a student will be expected to be able to:							
Lower order:	40%	- understand the different structure of inorganic solids					
- understand the various synthesis methods and characterisation tech						erisation techniques	
structures							
Middle order: 40% - analyse crystal structure from diffraction techniques							
		- research literature and critically review articles					
Higher order:	20%	- prepare slides and give a presentation					
Module Contents							
- Structure of inorganic solids, basic crystallography: Bravais lattices, unit cells, lattice parameters							
Miller indices and types of defects present, different types of crystal structures							
- Synthesis methods: ceramic, sol-gel, chemical vapour deposition, hydrothermal method etc.							
- Characterisation techniques: Powder X-ray diffraction, Neutron diffraction, Bragg's Law,							
X-ray spectroscopy, Microscopy, etc.							
Assessment Formative		Tutorial and feedback					
/10000001110110	assessment						
	Summative		Examination: 60%				
assessm		sment	Cour	Coursework: 40%			
			- 1 oral presentation (10%)				
			- 1 w	ritten assignment (10%)			
			- 2 cl	- 2 class tests (20%)
